

PRODUCT SPECIFICATION

DYNAPROOF/Waterproofing

DESCRIPTION

Dynaproof is a superior water based formulation which does not have an offensive vapour odour as present in the alternative brands currently available. Dynaproof will help to increase the life of canvas by restoring weather proofness and resistance to mildew. The Dynaproofed™ finishing formulation utilises the world's highest quality chemicals and incorporates Rot-Proofing, Mildew resistance, UV Resistance, Pigment Colours, Water-Proofing agents and 2 Acrylic binders in the processing formulation. The 2 acrylic binders offer maximum UV resistance and colour stability in terms of light fastness (maximum of 7), and also combine to resist both air-born and wet-soil bacterial and fungicidal activity.

Application

The Dynaproof formulation is designed to penetrate into the interstices of the canvas to be restored rather than sit on the surface. By doing so, on sound cloth, it restores the waterproof factor back to its original specification.

Dynaproof can be applied to any Cotton or blended Cotton Canvas product commonly used in tents and on Caravan awning roofing.

Dynaproof is not recommended for application on Acrylic or 100% synthetic Canvas.

The fabric should be thoroughly dry and brushed free of dust and dirt. Once this has been conducted, the fabric should be laid flat on the ground and then the reproof formulation applied.

This may be applied by any one of the following methods: Sponge, Roller, Brush or Spray Gun.
